

November 2015

Dear Valued Customer,

This letter is to give an update from the letters sent in October 2012 and August 2013 and inform only our European Customers that it is our intention to stop selling the following products in Europe as of **December 1st, 2016**.

<u>Product</u>	<u>Name</u>
850-7799	Accelerator
850G-314	Primer Green
850G-321	Primer Grey

The presence of chromium (VI) oxide and chromic acid on Annex XIV of REACH and the inclusion of chromic acid on the authorisation list of recommendation set by the European Chemicals Agency (ECHA) prohibits the use of these products after the sunset date of September 21st, 2017.

You will be able to buy the required inventories to go through the transition to the new products. Please keep in mind as you work with your local Chemours representative that expected volumes might be restricted and will have to be communicated well in advance. Also, no change in your projected volumes will be accepted after the date of **July 1st, 2016**.

We take this opportunity to also communicate that Chemours R&D is carefully exploring innovative technologies to replace the current product line aimed for General Industrial use. We will keep you informed on progress with the intention to sample within first half of 2016, however we encourage you to exert effort to identify and qualify other alternative products you may find in the market.

Thank you for your continued business with Chemours. Please contact your local representative regarding any questions you may have.

Yours Sincerely,

Patrick Redon
