### **Chemours Chambers Works Surveying and PFAS Sampling Program Residential GAC System Results – 2Q21**

Dear Ms. Kavvadias:

The E.I. du Pont de Nemours and Company voluntarily conducted a residential drinking-water well surveying and sampling program within a two-mile radius surrounding the Chambers Works Facility in Deepwater, New Jersey in 2009. The Chemours Company (Chemours) implemented a second surveying and sampling program in 2016, referred to as the Ongoing 2016 Program, which covered the same geographic area as the 2009 surveying and sampling program. The Ongoing 2016 Program was implemented as part of the Resource Conservation and Recovery Act (RCRA) Corrective Action Program under the oversight of the U.S. Environmental Protection Agency (USEPA) through the Hazardous and Solid Waste Amendments of 1984 (HSWA) Permit No. NJD002385730. Based on the results from these programs, expanded areas of surveying and sampling were identified during the Ongoing 2016 Program, and surveying and sampling is still in progress.

Granular activated carbon (GAC) treatment systems are installed where residential drinking-water wells, sampled as part of the Ongoing 2016 Program<sup>1</sup>, meet or exceed the New Jersey Drinking-Water Standards listed below:

- Perfluorooctanoic Acid (PFOA) at 14 nanograms per liter (ng/L) or 0.014 micrograms per liter (µg/L)
- Perfluorooctanesulfonic Acid (PFOS) at 13 ng/L or 0.013 µg/L
- Perfluorononanoic Acid (PFNA) at 13 ng/L or 0.013 µg/L

Quarterly Operation, Maintenance and Monitoring (OM&M) sampling for PFOA, PFOS and PFNA is offered for each residential GAC treatment system<sup>2</sup> and the results are reported for each quarter within two weeks of receipt of the final laboratory analytical results.

---

<sup>1</sup> One drinking-water well sampled in 2009 exceeded the 2009 USEPA Provisional Health Advisory of 400 ng/L and a GAC treatment system was installed at the residence to treat the drinking water on June 15, 2009.

<sup>2</sup> Well owners are contacted by telephone to schedule quarterly sampling. If no response is received, Chemours makes at least two additional attempts to contact the well owner. If Chemours is unable to contact the owner and schedule sampling, a non-response letter is prepared and sent to the well owner, is copied to the township municipal clerk, and the Salem County Health Department and shared with USEPA and NJDEP.

The following documentation for this quarter's residential GAC system monitoring is attached:

- Table 1 (hard copy and PDF), which provides information for all residential GAC systems installed as a result of this surveying and sampling program, including residential GAC systems that were installed during this quarter and will be incorporated into the OM&M program in the next quarter, as well as any residential GAC systems that were removed after installation and the justification for removal, organized by Regulatory Location ID<sup>3</sup>
- Table 2 (hard copy and PDF), which provides all PFOA, PFOS and PFNA results to date for each residential GAC system included in this quarter's OM&M sampling, organized by Regulatory Location ID
- Table 3 (hard copy and PDF), which provides all PFOA, PFOS and PFNA results for each residential GAC system that has been removed, organized by Regulatory Location ID
- Figure 1 (hard copy and PDF), which provides the location of each residential GAC system installed as of the end of this quarter and provides the location of each residential GAC system that has been removed, shown by Regulatory Location ID.

If you have any questions, please call me at 302-773-1289.

Sincerely,

Andrew S. Hartten  
Remediation Manager  
Chemours Corporate Remediation Group

---

<sup>3</sup> Chemours posts the results from the ongoing residential drinking-water well surveying and sampling and treatment system OM&M programs to a publicly accessible website (<https://www.chemours.com/en/about-chemours/global-reach/chambers-works>) for the Chambers Works Facility in Deepwater, New Jersey in association with the public participation plan implemented under the site's RCRA Corrective Action Program. To ensure residential confidentiality, the drinking-water well and treatment system results are identified by a Regulatory Location ID, instead of the Location ID (which is the drinking-water well address or an abbreviated version of the address).

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

<b>Location: 302</b>					
PT	8/20/2019	0.034	0.0061	0.0028	New well installed (Regulatory Location ID #416). Not qualified so GAC removed 12/05/2019.
BED1	8/20/2019	<0.0020	<0.0020	<0.0020	New well installed (Regulatory Location ID #416). Not qualified so GAC removed 12/05/2019.
BED1	5/21/2019	<0.0020	<0.0020	<0.0020	
BED1	2/15/2019	<0.0020	<0.0020	<0.0020	
BED1	11/27/2018	<0.0020	<0.0020	<0.0020	

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. For samples collected prior to 10/1/2013, results for PFOA are reported under the following protocol: ND < LOD < NQ < LOQ where ND = Not Detected, NQ = Not Quantifiable, LOD = Limit of Detection, LOQ = Limit of Quantitation; the LOD/LOQ may have varied by instrument and quarter. For samples collected after 10/1/2013, samples are reported to a reporting limit (RL) of 0.0050 ug/L for PFOA. For samples collected after 6/30/2016, each target compound RL is 0.0020 ug/L. J = Analyte present, reported value may not be accurate or precise; UJ = Not detected, reporting limit may not be accurate or precise; B = Not detected substantially above the level reported in the laboratory or field blanks. Samples identified as BED1 were collected after the first carbon bed. Samples identified as BED2 were collected after the second carbon bed and represent the treated water. All other samples collected were prior to Chemours treatment. Samples identified with -D or -DUP are duplicate samples. Starting with the 3Q20 samples, the samples are analyzed by USEPA Method 537.1. Prior to 3Q20, the samples were analyzed by a modified method 537.

**Table 3. Removed Residential Granular Activated Carbon (GAC) Treatment System Results – Chemours Chambers Works, Deepwater, New Jersey**

Field Sample ID	Date	PFOA	PFOS	PFNA	Comments
PT	9/28/2018	0.033	0.0031	0.0022	
BED1	9/28/2018	<0.0020	0.0034	<0.0020	
	4/25/2018	0.04	0.0032	<0.0020	GAC installed 06/28/2018.

Concentrations in ug/L. Concentrations are rounded by the laboratory and reported to two significant figures. **Notes:**  
 This figure shows the location of all residential granular activated carbon (GAC) systems installed by Chemours or installed and later removed at the resident's request by Chemours near the Chambers Works site, in Deepwater, New Jersey as of June 30, 2021. See Table 1 for information on each GAC system installed. See Table 2 for available perfluorooctanoic acid (PFOA), Perfluorooctanesulfonic acid (PFOS) and perfluorononanoic acid (PFNA) results for each location where a GAC system is installed. See Table 3 for available PFOA, PFOS and PFNA results for each location where a GAC system was installed and later removed at the resident's request.
